The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254PID6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous mucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO.3, sor 7 ARROSS22, ARROSS24, or ABROSS96), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or

identical to an entire amino acid sequence of P1; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PlD6B-related protein or a 254PlD6B-related protein or a 254PlD6B-related protein or a cast that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human cunit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cyctoxic agent or a diagnostic agent to a cell that expresses the protein of P1, 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful cor treating and detecting cancer. The present sequence represents a human 254PlD6B vi amino acid sequence, which is used in the composition of the present invention. The human 254PlD6B gene is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       located on chromosome 6p22

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the oncodes the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous contiguous aniho acids of a protein of figure 2 (Pl. see SEQ ID nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous aniho acids of a protein of figure 2 (Pl. see SEQ ID NO:3), 5 or 7 ADRO0559, or appetide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) confecting, in a sample, the presence of a 254P1D6B-related protein or a conference of a 254P1D6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; (3) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P1D6B has cytostatic activity, and can be composition in gene blrapy. The composition or survival of cancer cells that express the human 254P1D6B victone is need in the exemplification of conference of the present invention. The human 254P1D6B gene is located on chromosome conference or the present invention. The human 254P1D6B gene is located on chromosome conference.

Example 5; SEQ ID NO 273; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to composition that comprises a double stranded siRNA that corresponds to composition that comprises the nucleotides in length. Also described: 1, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 [P1, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00569, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein cot that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5) a generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PID6B-related protein or a composition that modulates the composition that comprises the composition described above; (1) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that expresses the protein of P1; (1) a non-human transgenic animal that expresses the protein of P1; (1) a non-human transgenic animal that expresses the protein of P1; (1) a non-human transgenic animal that expresses the protein of P1; (1) a non-human transgenic animal that expresses the protein of P1; (1) a non-human transgenic animal that expresses the protein of P1; (1) a non-human transgenic animal that express the protein of P1; (2) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PID6B has cytostatic activity, and can be human 254PID6B v1 protein sequence, which is used in the expression of the present invention. The human 254PID6B gene is located or survival of successing th

```
The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cate of the nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID ONC3, 5 or 7 ADR00929, ADR00596), or a peptide in included in any of the 42 lists of peptides of sequence of P1; (2) a polynucleotide that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous consists escenting of encourage of the encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) detecting in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition that modulates the composition that comprises the composition does form; (8) an antibody or its fragment, which is monoclonal; (9) which does form; (8) an antibody or its fragment, which is monoclonal; (9) which does form; (9) an antibody or its fragment, which is monoclonal; (9) which does form; (9) an antibody or its fragment, which is monoclonal; (9) which does form; (9) and the protein or a composition that produces the antibody; (10) a pharmaceutical composition that produces the antibody; (10) a pharmaceutical composition animal that produces the antibody; (10) a pharmaceutical composition animal that produces the antibody; (10) a pharmaceutical composition animal that produces the antibody; (10) a pharmaceutical composition animal that produces the antibody; (10) a pharmaceutical composition animal that produces the antibody or its fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hybridoma that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P106B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254P106B v.3 protein sequence, which is used in the exemplification of the present invention. The human 254P106B gene is located on
                                                                       New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                       Example 5; SEQ ID NO 274; 345pp; English.
                                                                                                                                                                                   treating cancer.

```
The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous corresponds to a subsequence of the ORF, where the consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0552, ADRO0594 or ADRO0556), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polymuclectide that encodes the protein; (3) a composition comprising a polymuclectide that is a full complement of the polymuclectide described above; (4) composition in a sample, the presence of a 254PID6B-related protein or a composition that modulates the status of a cell that expresses a protein of Pl; (7) a pharmaceutical composition that comprises the composition described above in a human composition that comprises the composition of Pl; (10) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pl; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent, reproduction or survival of cancer cells that expresse the protein of Pl; 254PID6B has cytostatic activity, and can be human 254PID6B v.3 protein sequence, which is used in the exemplification.
                                                                                                               New 254PID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PID6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                Example 5; SEQ ID NO 272; 345pp; English.
                                                         2004-580991/56.
Perez-Villar JJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chromosome 6p22

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PID6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists as length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pt, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98* homologous or that encodes the protein; (3) a composition comprising a polynucleotide that is a full complement of the polynucleotide described above; (4) cannoplement of the presence of a 254PID6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition described above; (10) a non-human transgent animal that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con-human transgenic animal that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con-human iransgenic animal that produces the antibody; (11) delivering a cytocoxic agent or a diagnostic agent to a cell that expresses the protein of P1; 254PID6B has cytostatic activity, and can be captured by in gene therapy. The composition or survival of cancer cells the expresses the protein of P1; 254PID6B will be a captured on chromosome of the present in the exemplification of the present content of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         250

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the nucleotides protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous mucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl. see SEQ ID NO.3, 5 or 7 ADRO0592, ADRO0594 or ADRO0566), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein composition that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 994 homologous or identical to an entire amino acid sequence of Pl: (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) composition that is a sample, the presence of a 254PIDGB-related polymucleotide; (6) a composition that modulates the composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B v. 3, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                       New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                            3
                                                                                            99
                                                                                            PM,
                                                                                            Challita-Eid
                                                                                                                                                                                                                                                                                                                                                                                                                    Example 1; SEQ ID NO 10; 345pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel isolated SECP (secreted protein)

Complypeptide. The polypeptide of the invention demonstrates

Comeroprocective, relaxant, antithyrood, antidiabetic, cytostatic,

dermatological, immunosuppressive, antiinflammatory, thyromimetic,

antiallergic, cerebroprotective, gastrointestinal, hepatotropic,

compliant antiparsitic, antiparkinsonian, antibacterial,

antiparsasitic, fungicide, protozoadide, viucide, uropathic,

antirheumatic, cardiant, cardiovascular, anti-HIV and nootropic,

antirheumatic, cardiant, cardiovascular, anti-HIV and nootropic

continities. The polypeptide may be useful in diagnoshing, preventing and

treating disorders including neurodegenerative disorders such as

Composition dystrophy and catatonia, endocrine disorders particularly

chabetes and Grave's disease, cancers such as leukaemia, cervical or

breast cancer, immunological disorders including scleroderma, systemic

charbetes and Grave's disease, cancers such as leukaemia, cervical

charbetes and disease, renal disorders engencers

composition's disease, renal disorders engencers

comparaticularly Crohn's disease, renal disorders engencers

comparation's disease, renal disorders engencers

comparation's disease, renal disorders engencers

comparation's diseases, renal disorders engencers

comparation's diseases particularly viral, bacterial, fungal, parasitic,

protozoal, helminthic, cardiovascular disorders engencers

cond hepatic diseases particularly cirrhosis. The polynucleotides may be

consent therapy procedures. The current sequence is that of the human SECP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

This invention relates to novel membrane proteins that are associated with differentiation and/ or metabolic function of adipocytes, in particular of mouse origin. Specifically, it refers to the isolated nucleic acid molecules encoding all or part of these proteins, appropriate antibodies and screening assays useful for the development of drug compositions derived thereof. The present invention describes these compositions as useful for the treatment of diseases associated with abnormalities of adipocyte function, such that they can be used to prevent, treat or diagnose obesity, hypertension, hyperlipaemia, diabetes and arteriosclerosis. Accordingly, they exhibit anorectic, antidiabetic, antiarteriosclerotic, antilipaemic and hypotensive activities. This polypeptide is a murine membrane protein sequence related to adipocyte function of the invention.
